

# 10 000 square meters of photovoltaic panels for power generation

## Overview

---

Estimate how many solar panels fit your roof and the total system capacity (kW) based on roof area and panel specifications. The answer lies in something most solar salespeople never properly explain— solar irradiance and your actual energy potential per square meter. Here's what's shocking: A single square meter of solar panel can generate anywhere from 150 to 250 watts under ideal conditions. Under optimal conditions (5 peak sun hours): At noon under direct sunlight: \*Note: 1m<sup>2</sup>. That's the wattage; we have 100W, 200W, 300W solar panels, and so on. How much solar energy do you get in your area?

That is determined by average peak solar hours. The UK and North USA get about 3-4 hours.
