

2 5 square photovoltaic panel specifications

Overview

Please see the following specification sheet for further details and panel specifications. Roof Load Capacity is Rarely a Limiting Factor: Solar panels add only 3-4 pounds per square foot to roof load, well within the 20+ pound capacity of most residential roofs. The real constraints are typically usable roof space after accounting for required 3-foot setbacks and obstruction clearances. A common configuration for an array of this size might be 10 rows of 25 panels each. Using the average solar panel size of 6 feet by 3.5 feet wide and weigh between 40 to 50 pounds.
