

24V DC to 380V inverter

Overview

A 24V to 380V inverter is a power conversion device that transforms 24-volt direct current (DC) from a battery or solar system into 380-volt alternating current (AC), which is commonly used in industrial and commercial applications. Very rugged and reliable. Isolated, can be used in positive or negative ground applications. HEAT DISSIPATION PERFORMANCE: Our high performance vector frequency inverter uses a 24V DC cooling fan and an external aluminum cooling base to dissipate heat very efficiently. These inverters are essential for off-grid energy systems, backup. American ATEMEL microprocessor, digital control. RS232/485 communication, remote data collection and monitoring. 208VAC or 380VAC or 415VAC output, 6000 watts.
