

Armenia wind solar and storage energy docking plan

Overview

This plan serves as a key implementation tool and maps Armenia's framework for NDC action until 2035 (in line with the most recent NDC, or “NDC 3.0”), ensuring that national climate goals are backed by a structured, results-driven approach. As Armenia works towards the Government's ambitious renewable energy targets and the share of variable renewable generation increases, the country might need to install battery storage systems to ensure the reliable and smooth operation of its power system. While the need for battery storage is, renewable energy resources, including hydro, represented 7.1% of Armenia's energy mix in 2020. Forming the foundation of Armenia's renewable energy system as of 6 January 2022 were 189 small, private. A 25-35 MW-4h BESS offers a cost-effective solution to enhance system resilience. Armenia imports 81% of its primary energy supply and 100% of its fossil and nuclear fuels. NPV and IRR were used to assess the economic depends on Armenian interconnections with neighbours. Battery storages play a more important role in less flexible environment and in a more constrained system operation.

Armenia wind solar and storage energy docking plan

[Armenia's Push for Clean Energy and Sustainable Development](#)

This includes scaling up solar energy to 15% of total production, requiring 500 megawatts (MW) of new solar capacity with storage, alongside 500 MW of wind power. With additional investments in large ...

GET_ARM_PS_01_2025_EN

Armenia imports 81% of its primary energy supply and 100% of its fossil and nuclear fuels. These imports stem mainly from Russia and to a lesser extent also from Iran. Expansion in cross-border ...

[Armenia Wind Solar and Storage Energy Docking Plan](#)

What is Armenia's long-term energy strategy? In its long-term strategy (up to 2040) for the energy sector, adopted in January 2021, the Armenian government identified the maximum utilization of renewable ...
