9 (E) requires any personnel doors intended for entrance to, and egress from a battery room, to open in the direction of egress and be equipped with listed panic hardware. Below is a preview of the NEC®. ORG for the complete code section. Battery room ventilation codes and standards protect workers by limiting the accumulation of hydrogen in the battery room. Hydrogen release is a normal part of the charging process, but trouble arises when the flammable gas becomes concentrated enough to create an explosion risk — which is why. Battery systems pose unique electrical safety hazards. Local Authorities Having Jurisdictions often have varying requirements based on areas they serve. This paper addresses the minimum requirements from Local, State and Federal requirements and historical trends in various.
