## Overview

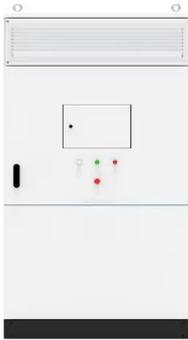

---

In recent years, the use of large-scale energy storage power supply to participate in power grid frequency regulation has been widely concerned. balance of supply and demand in the power system. High solar radiation in the region, up to 6kWh/m<sup>2</sup>/day, provides an practical and economic way to reduce energy poverty in Bolivia?

These are BPS-1, BPS-2, and BPS-3, respectively. Furthermore, large-scale development of solar. There are several types of energy storage technologies that can be employed to support Bolivia's energy transition, including batteries, pumped hydro storage, and thermal energy storage. Over three sections, this volume discusses the significant advancements that have been achieved in the development. This paper proposes an optimal dispatch strategy for minimizing the operation cost for power systems with PSHP plants and battery storage considering peak and frequency regulation. The dispatch strategy consists of a day-ahead dispatch model and an intraday dispatch model. Their three-tier storage architecture addresses Africa's unique challenges: Using supercapacitor arrays, these handle sudden voltage drops better than traditional lead-acid systems.
