

# Can 45 photovoltaic panels be connected in series

## Overview

---

How to connect multiple solar panels together in series: Connect the positive (+) cable of one panel to the negative (-) one of the next panel. Continue with the rest until all panels are. Connecting more than one solar panel in series, in parallel or in a mixed-mode is an effective and easy way not only to build a cost-effective solar panel system but also helps us add more solar panels in the future to meet our increasing daily needs for electricity. This configuration is essential for grid-tied systems, long cable runs, and applications.

Connecting solar panels in series is a common approach. This ensures safety, efficiency, and maximum energy output from your system. You can do that one of two ways (or a hybrid of both).
