

# Can solar panels generate voltage at night

## Overview

---

No — standard photovoltaic (PV) solar panels do not generate useful electricity at night because they require photons from sunlight (solar irradiance) to free electrons and create current. Rather than drawing power from the sun, the panel absorbs heat emanating from its own surface as. Luckily, yes, solar panels can still generate power during cloudy days and in the evening hours and we'll explain how. The panels absorb hues reflected from the sky, allowing them to create power. Moonlight, however, is only about 0.00003% as intense as direct sunlight.
