

Design of urban mobile energy storage system

Solar

Overview

This study tackles these challenges by optimizing the configurations of Modular Mobile Battery Energy Storage (MMBES) in urban distribution grids, particularly focusing on capacity-limited areas. Compared to stationary batteries and other energy storage systems. To minimize the curtailment of renewable generation and incentivize grid-scale energy storage deployment, a concept of combining stationary and mobile applications of battery energy storage systems built within renewable energy farms is proposed. A simulation-based optimization model is developed. stribution systems in an emergency condition. The optimal placement and sizing of those units are pivotal for quickly restoring the curtailed loads.
