

Energy storage air cooling heat pump system

Overview

An innovative, all-electric hydronic heating solution that reduces carbon emissions, performs efficiently in cold climates, fits within urban space constraints, and reliably heats and cools buildings using thermal energy storage. Buildings in colder regions can electrify heating. The Trane® Thermal Battery air-cooled chiller plant is a thermal energy storage system, which can make installation simpler and more repeatable, saving design time and construction costs. Trane offers pretested, standard system configurations for air-cooled chillers, ice tanks, and pre-packed pump. University of Wisconsin and its partners will develop a flexible plug-and-play vapor compression system platform that allows direct integration of modular thermal energy storage (TES) units to air source heat pumps.
