

Finland energy storage for backup power

Overview

This report provides an initial insight into various energy storage technologies, continuing with an in-depth techno-economic analysis of the most suitable technologies for Finnish conditions, namely solid mass energy storage and power-to-hydrogen, with its derivative technologies. In the second place are hydrogen technologies, i.e., bioenergy and rapidly growing wind power. The increasing share of renewable energy sources in electricity generation and their production variability likely have contributed to the growing impact of energy storage, as the most uncertain topic guiding operations. The energy storage facility is owned by a joint venture between Ardian's Clean Energy Evergreen Fund and the local energy provider Lappeenranta Energia.
