

Fixed Financing for Solar-Powered Containers in Data Centers

CE UN38.3 MSDS

Overview

These solutions are tailored to the unique risk profiles of modern data center projects — often massive, single-tenant campuses for creditworthy hyperscalers that can require power capacity in excess of 1 gigawatt and billions of dollars in initial construction capital. Data center construction is experiencing double-digit growth in the US, a trend that is likely to continue until 2030 and beyond. ¹ Accompanying that growth is an increase in deal activity, as developers and hyperscalers — the major players who own and operate large-scale data facilities — vie to. Data center financings in the United States were \$30 billion in 2024 and are expected to reach \$60 billion this year. The financing structures have some similarities with traditional project finance structures used in power and LNG deals, but there are also differences. SB Energy, which is part of SoftBank's portfolio, is expected to develop solar installations backed by grid-scale batteries. ¹ trillion globally in 2023, reflecting increasing demand for green infrastructure investments.
