For island users the outer cabinet depth is 800mm

Overview

The standard depth for a kitchen island is usually 24 to 36 inches (61 to 91 cm), but if the island includes appliances or a sink, a depth of 36 to 42 inches (91 to 107 cm) is more suitable. We'll need accurate room measurements from wall to wall, excluding moldings. Then select cabinet depth, walkway clearance, seating, sink, cooktop and storage preferences. Next, our calculator goes to work crunching the numbers, analyzing proper clearances and cross-checking your choices against. These measurements are based on having an island 900mm in depth. For example, if you want an island that is 1200mm deep (full cabinet + shallow depth cabinet on the back + overhang), you would need to add an. This guide explains how to choose basic cabinets to create an island, including standard cabinets, special storage possibilities, and the depth measurements that make for an effective island. The backbone of most islands is the standard 24-inch deep base cabinet. For height, it's best to match your current countertop level for a seamless look.

For island users the outer cabinet depth is 800mm
