

Fuse inside the solar inverter

Overview

To properly fuse a solar system, you must install DC-rated fuses sized at 156% of the array's short-circuit current ($I_{sc} \times 1.56$) in the positive conductors of parallel-connected strings, following NEC Article 690 requirements for overcurrent protection. When an electrical anomaly occurs, such as a. Turn the inverter upside down and disconnect the battery from the inverter. Fuses in inverters work as a security system that can cut off dangerous electricity, to prevent damage to the system. In this case, the battery, wires, and AC/DC.
