

Homemade hand-cranked small solar generator

Overview

In this project, I build a simple DIY hand-crank generator that can be made at home using basic components. This small generator is designed for emergency situations and off-grid use, where access to electricity is limited or unavailable. Drawing energy from the sun or wind to fuel your electronics, no matter where you find yourself, is within reach, even if you're not an expert. You can easily. Portable, weatherproof, and ready-to-rock — a homemade solar generator can meet all your power needs in and around your boat, camper, or cabin. You don't need to be an expert to build one. With a few tools and some basic knowledge, you can create a reliable source of energy. In my case, I made my own battery.
