

# Households with photovoltaic panels cannot use electricity

## Overview

---

Solar energy is on the rise, but what happens to the estimated 77% of U. households that can't install rooftop solar?

Renewable power generation surpassed nuclear in the United States in 2021 and coal the following year, according to a U. Energy Information Administration analysis. That same. Millions of Americans are deciding to power their homes with solar energy—especially as costs have decreased—but an investment in solar energy generates more than just clean energy. Existing studies on the adoption of solar panels primarily focus on electricity consumption at the import or export level, but results are inconsistent: some papers estimate a net reduction in consumption imported from the grid, while others differ on the extent to which the reduction is dampened. A solar panel is a device that helps convert sunlight into electricity. The cons include high initial costs, specific roof requirements, possible higher property.
