

How about solar power generation for farmers

Overview

Farmers can benefit from solar energy in several ways—by leasing farmland for solar; installing a solar system on a house, barn, or other building; or through agrivoltaics. Agrivoltaics is defined as agriculture, such as crop production, livestock grazing, and pollinator habitat, located underneath. In the race to meet renewable energy goals as demand rises across the United States, farm and ranch land is increasingly becoming a target for solar development. According to the American Farmland Trust's (AFT) Farms Under Threat: 2040 analysis, there is potential that 83% of solar built by 2040.
