

How big an inverter should I use for a 18000w photovoltaic panel

Overview

Generally, it's recommended to size the inverter to 80-100% of the DC system's rated capacity. Before determine the inverter size, the most important thing is to calculate your average daily power consumption (kWh) and calculate your solar panel array size to match your power. A question to ask: How close should the inverter rating be to the panel wattage?

Ideally at 80-110%, to compensate for panel overproduction in bright sunlight and to avoid compromising inverter efficiency. Select an Appropriate Inverter Rating Here's how inverter sizes usually correlate: Panels:. Your inverter size should match your solar array's capacity, not your electricity bill. Let's say you have a 6kW solar array (twenty 300-watt panels).
