

How big of an inverter is needed for a 28kW solar system

Overview

Enter your solar array capacity and load requirements to determine optimal inverter size. Inverter Size = MAX (Array Capacity × 1.25) for safety margin. This formula has been verified by certified solar engineers and. Your solar inverter serves as the translator between your panels and your home's electrical system. Solar panels generate direct current (DC) electricity, but your home runs on alternating current (AC). What Size Solar Inverter Do I Need?

A solar inverter should closely match your solar system's output in kW—typically within 80% to 120% of your total panel capacity. In this guide, you'll learn what size solar inverter you need, how to size an inverter for solar systems step by step, how panel output affects inverter capacity and also how many inverters per solar panel make sense for different setups without the headache.
