

How many kilograms of generator does a wind cannon use

Overview

A small wind energy system has a power output as much as 100 kilowatts. A 100-kilowatt turbine operating in a sufficiently windy location (on average 12MPH) can produce enough electricity over a year for 20 typical homes. Let's cut through the confusion surrounding pneumatic wind cannons and their surprising lack of kilowatt-producing capabilities. Picture this: you're at a county fair watching a pneumatic wind cannon blast paper targets into oblivion. The operator proudly claims it uses "wind power," and suddenly, the Wind Cannon (Windkanone) or Whirlwind Cannon (Wirbelwind Kanone) was an unsuccessful anti-aircraft cannon developed in Nazi Germany during World War II. [2][3] It was one of Adolf Hitler's wonder weapons and aimed to utilize powerful blasts of air to disrupt enemy aircraft. When air blows through them, they. The cannon worked by the ignition of critical mixtures of hydrogen and oxygen in molecular proportions as near as possible. The powerful explosion triggered off a rapidly-ejected projectile of compressed air and water vapor, which, like a solid "shot" of air, was as effective as a small shell.
