Even though we said that we will be counting the least value of variables, here, we are counting the ideal one. Because if the value was 12 volts DC, then the inverter would have converted it to at least 110 volts of AC. So, the amps of the 3000-watt inverter in 120 volts will be $3000 \text{ watt} / 120 \text{ volts} = 25 \text{ amps}$ / See more on walkingsolar Savvy Calculator
