

How to carry photovoltaic panels

Overview

Snippet paragraph: Safely transporting solar panels needs careful planning, strong packaging, and secure loading. Control temperature and humidity in transit. Use foam padding, avoid heavy stacking, and tie panels with straps. Control. Modern solar panels are generally constructed as glass-covered photovoltaic arrays, designed to withstand decades of outdoor weather while converting sunlight into electricity. This robust external appearance can be misleading, as the delicate silicon cells beneath the glass are highly susceptible. We in HBOWA supply tier-1 solar panels and LiFePO4 batteries to our partners across the globe post ensuring that the panels are handled and packed well with the best practice for solar module transportation. Here is how a good company packs it:

- First panels go on the pallet bottoms up and the last one is placed front side up.
- Usually a piece of cardboard or plastic is placed in. Packed Pallet on a Pallet: According to the panel dimensions.

Shipping in Less Than Pallet Quantities: Either in your vehicle or to a shipping company in packaged form.
