A backfeed breaker can be used to connect a solar PV system to the load-side of a service. There are several different ways this can be done per the NEC but the most common method for solar residential installs is by connecting it to the end of a busbar using the 120% rule. Can you mount solar panels upside down?

While you can mount solar panels upside down, and while people have done it before, you should probably avoid mounting solar panels upside down unless the manufacturer specifically instructs you to do so. To put all of this into perspective for you, this. As is the diode box and wiring is on the panel "upper edge", and once in place the top row will block access to any wiring for the bottom row. If I mount the lower row. Scroll to the bottom of any page to find a sun or moon icon to turn dark mode on or off! Can a solar panel be mounted upside down?

I have a tri-fold bed cover on my F250 and when folded, the center section faces up. When the cover is unfolded and locked, the center section is facing down. But, vertically mounted solar panels will produce significantly less energy compared to traditionally angled panels. A faulty connection might lead to equipment overload, and inspectors might not catch the mistake right away.
