

Inverter outdoor mole cricket catching

Overview

Soapy water and nematodes are the best course of action for eliminating mole crickets outside. Molasses can kill crickets in homemade traps, so place a jar with steep sides in cricket-prone areas. European mole crickets (*Gryllotalpa gryllotalpa*) are notorious pests that can cause significant damage to lawns, gardens, and agricultural crops. Their burrowing behavior disrupts soil structure, damages roots, and often leads to unsightly mounds on the surface. Controlling their population is. A mole cricket is easily identified by its grayish-brown, velvety body, short wings, and large, black eyes. It has wide, claw-like front legs adapted for digging and hind legs for jumping, and antennae.
