

Li ion battery discharge rating

Overview

Every Li-ion battery has a manufacturer-specified maximum continuous discharge C-rate (e., 2C, 5C, 10C for high-performance cells). Exceeding this limit causes: Excessive heat generation (due to internal resistance). Short note: Think of C-rate as “current relative to size. The chart displays various C ratings and their corresponding discharge. For example, a typical lithium-ion battery delivers a nominal voltage between 3. At 50% state of charge, voltage can measure 3. It's. But their performance, safety, and longevity hinge on one critical factor: following proper discharge rules. Ignore these guidelines, and you risk reduced capacity.
