Lithium battery cascade utilization photovoltaic energy storage

Overview

This paper systematically reviews the research progress in the field of power battery recycling and cascade utilization, and analyzes it from four dimensions: technical path, economic model, policy impact and environmental benefit. In terms of technical paths, battery sorting technology based on. Three pricing decision models are established under the recycling model of the battery closed-loop supply chain are established in this paper: benchmark model, EPR regulatory model disregarding cascade utilization, and EPR policy model under cascade utilization. J Electr Technol 33(9):2 arios with low battery quality requirements, such. It focuses on the development status and existing challenges of residual capacity estimation methods and consistency sorting technology. Based on the review, this paper also looks. mal pricing decisions for supply chain members. The findings provide valuable insights for the operations of releva ng into the specifics of how it is carried out. This paper presents energy storage as a pathway of cascade utilization,incorporating cascade utilization enterprises (energ ire energy. The cascading utilization of power batteries mainly refers to: when the capacity of power batteries is reduced to below 80%, and it is difficult to meet the needs of new energy vehicles, the "decommissioned" batteries are screened and recycled.
