

New foundation for uninterrupted power supply to Male communication base station

Overview

In this article, an algorithm for automatic control of energy sources was developed to improve the uninterrupted power supply of mobile communication base stations. For base stations located in deserts or other extreme environments, independent power supply is essential, as these areas are not only. In today's digitally connected world, telecom base stations play an essential role in ensuring uninterrupted communication services. To adapt to these features, more reliable and economical power supply solutions.
