

# New solar panel power plant in Porto Portugal

## Overview

---

A large solar plant with around 90,000 panels was built next to an existing hydroelectric dam. Each system works on its own, but together they support each other. When clouds appear or night falls, the dam takes. At the Pracana site in central Portugal, the energy company EDP linked solar power and hydropower into one onshore system. The Santas solar power plant, located in the Alentejo region, represents a significant milestone for Akuo. Solar PV capacity accounted for 16. This is expected to contribute 33.7% by the end of 2030 with capacity of installations aggregating up to 4,822GW. Our Projects We are currently constructing a Solar PV Plant in the South of Portugal, delivered under a full EPC scope, that will feature 47,710 solar panels with a total installed capacity of 28.
