

Nitrogen cycle in energy storage power station

Overview

In April 2014, the UK government announced it had given £8 million to and to fund the next stage of the demonstration. The resulting grid-scale demonstrator plant at Landfill facility in,, started operation in April 2018. The design was based on research by the Birmingham Centre for Cryogenic Energy Storage (BCCES) associated with the University of Birmingham, and has storage for up to 15 MWh, and can generate a peak supply of 5 M.
