Overview

At present, there are 3 types of brackets used in most PV power plants: fixed conventional bracket, adjustable tracking bracket and flexible PV bracket. remain unchanged after installation. Think of it as the LEGO instruction manual for solar arrays, helping you sort through Let's face it - even seasoned solar installers occasionally mix up their clamps with their rails. That's. A PV bracket is a support structure that arranges and fixes the spacing of PV modules in a certain orientation and angle according to the specific geographic location, climate, and solar resource conditions of the PV power generation system construction. As an important part of the PV power. Photovoltaic bracket can be classified in the form of connection mode, installation structure and installation location. According to the connection form, it is divided into welding type and assembly type; according to the installation structure, it is divided into fixed type and day by day type;. Whether a stationary fastener or a part with free-moving components, our cross-industry professional designers are able to bring you new methods. New parts will reduce weight and speed up the work of assembly. FASTscrew can produce the right parts to simplify your process.
