

PCS control cabinet in microgrid

Overview

The PCS helps to regulate the flow of power between the energy storage system and the rest of the microgrid. Meanwhile, the ESS stores excess energy generated during periods of low demand and releases it. Based on our PCS module, a versatile solution designed to integrate seamlessly with multiple energy sources - solar, generators, battery, and other DER—both on and off grid. It integrates PCS, DC/AC Combining/Safety, Cooling, and Control/Communication components in a small footprint cabinet and. This project develops the measurement science necessary to support the widespread use of advanced power electronics to provide new functionality in the smart grid supporting integration of new and variable resources. The microgrid detects a grid failure and switches fast to an island in the protection mode. On the other hand, it changes the operation mode smoothly through a stabilization period in the auto-island mode.

PCS-9617MG is a coordinate control equipment specifically designed for microgrid (both grid-connected and islanded).

PRODUCT INFORMATION

- BATTERY CAPACITY**
50kWh~500kWh
- DC VOLTAGE RANGE**
400V~1000V
- DEGREE OF PROTECTION**
IP54
- OPERATING TEMPERATURE RANGE**
-10~50°C

[BROCHURE PCS100 ESS High Performance inverter for micro ...](#)

Built in Black Start - Micro-Grid priming application capable enabling control and protection system start-up without a secondary source Synthetic Inertia - Synchronous machine emulation providing system ...
