

PDS and Uninterruptible Power Supply

Overview

Power distribution units (PDUs) distribute power and protect IT loads running normally. Conversely, uninterruptible power supplies (UPSs) ensure there is enough power, at least for a short time, to run your equipment until you can find another available power supply (i. PDU (Power Distribution Unit) and UPS (Uninterruptible Power Supply) are both essential components in ensuring reliable power distribution and backup in data centers and other critical infrastructure. While a PDU is primarily responsible for distributing power to multiple devices and equipment, a. In the event of a failure, a well-designed PDS can make the crucial difference between a minor hiccup and the continuance of operations as normal, or catastrophic downtime leading to equipment damage, failure, and a cessation of the workflow until power is restored. Core Components of a Power. Whether for-profit or nonprofit, public or private, work is driven by technology that enables the speed and convenience a modern enterprise demands. This consumer's expectation is an “always-on” experience.
