Solar

Overview

This study presents a methodology for estimating the optimal distribution of horizontal single-axis solar trackers in photovoltaic plants. **ABSTRACT:** International standards play an important role in the Photovoltaic industry. Since PV is such a global industry it is critical that PV products be measured and qualified the same way everywhere in the world. IEC TC82 has developed and published a number of module and component measurement. This paper presents an optimisation methodology that takes into account the most important design variables of single-axis photovoltaic plants, including irregular land shape, size and configuration of the mounting system, row spacing, and operating periods (for backtracking mode, limited range of. Select sites, draw rectangles or polygons by clicking the respective map controls. Calculate energy production for selected sites.
