

Photovoltaic bracket bolt connection direction

Overview

Dual-axis tracking brackets can rotate in both east-west and north-south directions to track the azimuth and altitude angle of solar incidence throughout the day. According to the connection form, it is divided into welding type and assembly type; according to the installation structure, it is divided into fixed type and day by day type; kinds according to different connection methods. Welding must comply with relevant regulations, and the type on of a filler material (i. Remove the metal flashing before proceedin w It is to be observed. For M10 hanger bolts this dr n drilling into wood. The application of photovoltaic bolts in the field of photovoltaic brackets is very extensive, mainly used to connect photovoltaic panels to the bracket system, ensuring that the photovoltaic panels are firmly installed o TIONS ?
