

# Photovoltaic panel attenuation rate curve diagram

## Overview

---

2 show respectively the block diagram and the image of the conducted experimental I-V curve tracer for PV modules. Based on NREL-SAM's outdoor attenuation analysis of more than 2000 PV modules worldwide, the attenuation rate of the module after the second year will change linearly. The 25 year attenuation rate is between 8% and 14% (Figure 5). Therefore, energy degradation and component life-cycle are significant aspects in economic evaluation of a PV portion of photovoltaic modeling and analysis of solar power systems. The results obtained help to quickly and visually assess a given PVP (including a new one) in relation to the existing on-tactic power plant (PVPP) deployment. How to determine the attenuation rate of performance factors of PV panels?

To obtain the attenuation rate of performance factors, the experimental platform is used to test and record the power generation performance of PV panels, including output power, irradiance, voltage, current, etc. The output power. Fig.
