

Photovoltaic panel base pile core

Overview

Solar pile structures are foundational components supporting solar panel arrays, often composed of durable materials like steel or aluminum. This guide is tailored for pile driving contractors and engineers involved in solar farm projects—providing an in-depth exploration of the techniques, materials, and challenges associated with pile driving in this growing sector. The same properties that make them suitable for large structures also make them useful for some of the most lightly loaded, yet extensive structures currently being built, such as solar. At Exactus Energy, we specialize in providing thorough solar pile and foundation designs to set you up for success through installation and beyond.
