

# Photovoltaic panel controller connected to inverter

## Overview

---

Proper Connection Steps: Follow a systematic connection process: disconnect power, connect the charge controller to the battery, attach solar panels to the charge controller, and finally link the inverter to the battery. It's appealing to just connect solar panels directly to an inverter, and bypass the safer and more expensive charge controller. Solar panels produce a type of electricity called direct current (DC), and most homes and the power grid run on a form known as alternating current (AC). This guide explains the connection process, common mistakes to avoid, and industry trends to optimize your solar power system.
