Overview

This report is available at no cost from the National Renewable Energy Laboratory (NREL) at www.nrel.gov. National Renewable Energy Laboratory, Sandia National Laboratory, SunSpec Alliance, and the SunShot National Laboratory Multiyear Partnership (SuNLaMP) PV O&M Best Practices. After solar energy arrays are installed, they must undergo operations and maintenance (O&M) to function properly and meet energy production targets over the lifecycle of the solar system and extend its life. Conducting regular O&M ensures optimal performance of photovoltaic (PV) systems while. Preventative maintenance for solar assets is a proactive strategy that reduces the chance of failure resulting in unplanned downtime. A preventative strategy can include scheduled cleanings, component replacements, and system repairs. Although solar systems have a lifespan of over 25 years and operate quietly and reliably on a daily basis, they are not completely maintenance-free.
