

Pickup trucks equipped with photovoltaic panels

Overview

Pickup truck drivers are beginning to deploy solar panels on their cab roofs and truck beds, and they're not just for electric trucks. They can power electric tools and accessories on an ICE truck, too. Is the world ready for a solar-powered pickup?

It's about to get one, as Telo Trucks has partnered with solar car company Aptera to add solar panels to its MT1 pickup. Solarized pickups have been a DIY endeavor until now, but drivers without skills don't have to. Buyers can now select up to three solar panel kits, enabling them to charge on the go and enhancing their energy independence, even in remote locations. "Our unique curved solar cell design makes it the perfect application to propel automotive utility further than ever before," said Aptera co-founder and co-CEO, Steve Fambro.
