

# Power supply equipment for network base stations

## Overview

---

To address these challenges, a robust power supply scheme has been developed using Pulse Frequency Modulation (PFM), isolated AC-DC converters, and Zero Voltage Switching (ZVS) regulators. Network communication equipment plays a critical role in building AI infrastructure for enterprises, and its stable operation relies on the reliability of terminal power systems. To ensure the smooth functioning of network communication devices, power systems must be safe, stable, and dependable. This article presents a scalable and stackable -48 V DC PoL solution that will address the high density power usage situations created by these high density networks from the tremendous growth in network traffic. As DC power, BENNING has been supplying battery-based AC and DC power supplies to various mobile and fixed network operators worldwide for decades and has invested heavily in the development of highly efficient power supplies for energy-saving and reliable operation.
