

# Principle of photovoltaic panel lifting motor

## Overview

---

A patented module “hook” attaches to the edge of a PV module frame and prevents lateral sliding of the module in the hook. The module slides along the outward facing surface of the ladder rails. Motors used for applications are dc motors, induction motors or BLDC motors of which DC SHUNT motors are more advantageous and it is taken for analysis. The complete system consists of an array of solar panels a boost converter. Let's start with a reality check: installing photovoltaic panel hoisting motors is like trying to lift a housecat that suddenly decides to become liquid. The utility model discloses an automatic lifting device of a photovoltaic panel, which comprises a bottom plate, wherein a plurality of universal wheels are fixedly arranged at the lower end of the bottom plate, support plates are fixedly arranged at two sides of the bottom plate, and support. The azimuth and tilt angle effect the solar PV panel on their peak power production, economic value, total energy production, rate structures, electricity market prices, etc.

**Home Energy Storage (Stackble system)**

- Product Introduction**
- Scalable from 10 kWh to 50 kWh
  - Self-Consumption Optimization
  - Integrated with inverter to avoid the compatibility problem
  - LFP battery, safest and long cycle life
  - Stackable design of for easy installation
  - Capacity of high frequency
  - Emergency-Backup and Off-Grid Function
