

Reasons for high wind temperature of generator in summer

Overview

Reason: Under high temperature conditions, the generator continues to operate at high loads, resulting in a decrease in performance. -Replace with a higher power unit if necessary. This is especially important if you live in Portland, Oregon, where the weather is famously unpredictable. Whether you're relying on them during a power outage or using them to ensure continuous operations at work sites, their reliability is paramount. -If the internal scale is severe, the water tank needs to be removed and cleaned with a specialized cleaning agent. Reason: The thermostat is damaged, which prevents the coolant. Your generator is sensitive to temperature. It doesn't like it too hot or too cold.
