

Renewable electricity dominica

Overview

In recent years, Dominica has begun exploring alternative energy sources to enhance its sustainability and reduce dependence on fossil fuels. The government has prioritized renewable energy development, focusing on hydropower, geothermal, wind, and solar energy. Dominica » Dominica nears completion of geothermal plant set to power 23,000 homes by early 2026

Dominica's journey toward a greener, self-sustaining future is reaching a major milestone. The island's new geothermal power plant in Laudat is in the final stages of completion and is expected to. As energy policy evolves, renewable energy has become one of the key sectors influencing how Dominica aims to reach greater resilience, affordability and long-term security in its electricity supply. The Plan. Dominica's pursuit of renewable energy, in particular geothermal energy, has less to do with needing to significantly decrease its carbon emissions, but it gives an opportunity for the island to source its own electricity. The country primarily relies on imported fossil fuels, with diesel generators producing the majority of its energy as of 2024. As the island most advanced in geothermal explorations, Dominica is already a leader in renewable energy.
