

Should photovoltaic panels be placed flat or diagonally

Overview

In general, solar panels should be installed so the sunlight hits them at as close to a perpendicular 90-degree angle for as long as possible during the day. Till now all the solar panels I've seen. The solar panel's best angle determines how much sunlight your panels capture throughout the year, directly impacting energy production and ROI. A correctly tilted system can improve efficiency by 5–10% annually, reducing payback time and boosting long-term savings. This blog explores the advantages, drawbacks, and best practices for selecting the optimal solar module orientation based on various factors.
