

# Single-phase half-bridge high frequency inverter

## Overview

---

It is a single-phase half-bridge inverter in which only one power stage works at a high frequency so as to realize minimum switching loss. The minimum drop of the filtering inductance in the power loop is achieved to cut back the physical phenomenon power loss in each. Single Phase Half Bridge Inverter is a type of Single-Phase Bridge Inverter. It is a voltage source inverter. The simplest form of an inverter is the bridge-type, where a power bridge is controlled according to the sinusoidal pulse-width. A voltage-fed inverter (VFI) or more generally a voltage-source inverter (VSI) is one in which the dc source has small or negligible impedance. This is an innovative technique for producing fast complementary digital PWM signals with dead time to control a single-phase half-bridge inverter. Each thyristor is gated at frequency  $f = 1/T$  of the ac supply desired. 46. This paper proposes a new family of high potency DC/AC grid-tied inverter with a wide variation of input DC voltage.
