## Overview

---

Small wind turbines, also known as micro wind turbines or urban wind turbines, are that generate electricity for . These turbines are typically smaller than those found in . Small wind turbines often have passive as opposed to active ones. They use a generator and use a tail fin to point into the wind, whereas larger turbines have that are actively pointed into the wind.

Small wind turbines, also known as micro wind turbines or urban wind turbines, are wind turbines that generate electricity for small-scale use. These turbines are typically smaller than those found in wind farms. Small wind turbines often have passive yaw systems as opposed to active ones. They use a direct drive generator and use a tail fin to point into the wind, whereas

larger turbines have geared powertrains that are actively pointed into the wind.
