

# Smart Microgrid Power Generation System

Nominal Capacity

**280Ah**

Nominal Energy

**50kW/100kWh**

IP Grade

**IP54**

## Overview

---

Advanced microgrids enable local power generation assets—including traditional generators, renewables, and storage—to keep the local grid running even when the larger grid experiences interruptions or, for remote areas, where there is no connection to the larger grid. What is a microgrid?

A microgrid is a self-contained electrical network that can operate. NLR has been involved in the modeling, development, testing, and deployment of microgrids since 2001. A microgrid is a group of interconnected loads and distributed energy resources that acts as a single controllable entity with respect to the grid. Microgrids are enabled by integrating such distributed energy sources into the. The key contributions of this study include (i) an in-depth evaluation of MG features, functionalities, and technologies to highlight their benefits over conventional power systems; (ii) a review of advanced optimization methods for hybrid RES-based MGs to enhance energy reliability and. NLR develops and evaluates microgrid controls at multiple time scales. Our researchers evaluate in-house-developed controls and partner-developed microgrid components using software modeling and hardware-in-the-loop evaluation platforms.

## Smart Microgrid Power Generation System
