

# Solar electric panels generate low electricity

## Overview

---

Some energy loss is completely normal in any solar setup. Here's why:

**Inverter efficiency:** Most operate at 95–98%. Normal degradation is 0.8% annually: Quality solar panels naturally lose efficiency over time, so a system producing 10,000 kWh in year one should generate around 9,950 kWh in year two – this gradual decline is expected and warranty-covered.

**Inverters are the weakest link in solar systems:** With. Solar panels are meant to quietly do their work turn sunlight into savings. The good news is that low solar output is usually explainable, and many causes are easy to fix. It is important to check for any visible issues, such as shading or dirt on the panels. Regular Maintenance Practices, 2. Identification of the Cause, 3.
