

# Solar energy for the environment chile

## Overview

---

By recent accounts, solar and wind generation exceeded 33% of total electricity output in 2024, marking a record share. In parallel, the country has set ambitious targets: reaching ~70% renewables by 2030 and achieving carbon neutrality by 2050. Solar power in Chile is an increasingly important source of energy. [1] In 2024, Solar energy provided 19.63 GW, while over 4 GW of renewable projects are under construction, according to the National Energy Commission (CNE). From pv magazine LatAm Chile added 1,127 MW of PV capacity in 2025, bringing cumulative. Chile's unique geography - stretching over 4,300 km from north to south - gives it exceptional renewable energy potential. The Atacama Desert boasts some of the world's highest solar irradiance levels, while the Magallanes region offers wind resources that are among the best available anywhere. These deals—ranging from solar-only contracts to solar-plus-storage hybrids and project acquisitions—underscore a shift in Chile. Santiago, January 10th - Chile achieved a new milestone in December 2024 by generating a record 42% of its electricity from wind and solar, according to global energy think tank Ember.
