

Solar glass used as architectural glass

Overview

Unlike traditional solar panels, this glass can be transparent or semi-transparent, making it suitable for use in windows, facades, roofs, skylights, and other architectural surfaces—without compromising the aesthetic of the building. Photovoltaic glass is a type of glass that integrates solar cells into its structure, allowing it to generate electricity from sunlight. Unlike traditional solar panels that require designated space for installation, photovoltaic glass integrates. The Solarvolt™ building-integrated photovoltaic (BIPV) solar glass system can be integrated into most standard glass building systems, such as post-bolt systems. In this blog post, we examine the history of the technology, its use in buildings, and its advantages/disadvantages, starting with the question of What is Photovoltaic Glass?
